

**2021 ANNUAL DRINKING WATER QUALITY REPORT**  
**PWSID # 6420017 Hazel Hurst Water Company**

Este informe contiene información importante acerca de su agua potable. Haga que alguien lo traduzca para usted, ó hable con alguien que lo entienda. (This report contains important information about your drinking water. Have someone translate it for you, or speak with someone who understands it.)

**WATER SYSTEM INFORMATION:**

This report shows our water quality and what it means. If you have any questions about this report or concerning your water utility, please contact Bradley Himes at 814-598-3721. We want you to be informed about your water supply. If you want to learn more, please attend any of our regularly scheduled meetings. They are held the 2<sup>nd</sup> Tuesday every month at 7pm at the firehall

**SOURCE OF WATER:**

Our water source is one groundwater well. The well is located top of Chambers Street.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbiological contaminants are available from the *Safe Drinking Water Hotline* (800-426-4791).

**MONITORING YOUR WATER:**

We routinely monitor for contaminants in your drinking water according to federal and state laws. The following table shows the results of our monitoring for the period of January 1 to December 31, 2021. The State allows us to monitor for some contaminants less than once per year because the concentrations of these contaminants do not change frequently. Some of our data is from prior years in accordance with the *Safe Drinking Water Act*. The date has been noted on the sampling results table.

**DEFINITIONS:**

**Action Level (AL)** - The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

**Maximum Contaminant Level (MCL)** - The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

**Maximum Contaminant Level Goal (MCLG)** - The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

**Maximum Residual Disinfectant Level (MRDL)** - The highest level of a disinfectant that is allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

**Maximum Residual Disinfectant Level Goal (MRDLG)** - The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

**Minimum Residual Disinfectant Level (MinRDL)** - The minimum level of residual disinfectant required at the entry point to the distribution system.

**Level 1 Assessment** – A Level 1 assessment is a study of the water system to identify potential problems and determine (if possible) why total coliform bacteria have been found in our water system.

**Level 2 Assessment** – A Level 2 assessment is a very detailed study of the water system to identify potential problems and determine (if possible) why an *E. coli* MCL violation has occurred and/or why total coliform bacteria have been found in our water system on multiple occasions.

**Treatment Technique (TT)** - A required process intended to reduce the level of a contaminant in drinking water.

**ppb** = parts per billion, or micrograms per liter (µg/L)

**ppm** = parts per million, or milligrams per liter (mg/L)

**DETECTED SAMPLE RESULTS:**

<b>Chemical Contaminants</b>								
Contaminant	MCL in CCR Units	MCLG	Highest Level Detected	Range of Detections	Units	Sample Date	Violation Y/N	Sources of Contamination
Chlorine (Distribution)	MRDL= 4	MRDLG = 4	0.74	0.27 – 0.74	ppm	2021	N	Water additive used to control microbes.
Arsenic	10	0	3.50	N/A	ppb	9/30/21	N	Erosion of natural deposits; Runoff from orchards; Runoff from glass and electronics production wastes
Barium	2	2	0.243	N/A	ppm	9/30/21	N	Discharge of drilling wastes; Discharge from metal refineries; Erosion of natural deposits
Trihalomethanes	80	NA	2.19	N/A	ppb	9/30/21	N	By-product of drinking water chlorination
Iron*	0.3	NA	2.81	0.48-2.81	ppm	2020	Y	Naturally occurring mineral
Manganese*	0.05	NA	2.54	1.87-2.54	ppm	2020	Y	Naturally occurring mineral

**DETECTED CONTAMINANTS HEALTH EFFECTS LANGUAGE AND CORRECTIVE ACTIONS**

\*Iron and Manganese Maximum Contaminant Levels are based on the Secondary Maximum Contaminant Levels as stated in the Safe Drinking Water Act. These contaminants are regulated differently than contaminants on the primary list. However, Manganese levels remain above the EPA’s Health Advisory Level requiring the posting of the monthly “Do Not Consume” notice to all residents of the system. Hazel Hurst has been working with the PA DEP under a Consent Order and Agreement to remedy the situation. Free bottled water is being supplied to customers of the system at the firehall. If additional information is wanted contact Brad Himes at 814-598-3721.

<b>Entry Point Disinfectant Residual</b>							
Contaminant	Minimum Disinfectant Residual	Lowest Level Detected	Range of Detections	Units	Lowest Sample Date	Violation Y/N	Sources of Contamination
Chlorine 2021	0.40	0.00*	0.00- 1.41*	ppm	March 2021*	Y*	Water additive used to control microbes.

\*On several days of March of 2021, we failed to reach our Minimum Residual Disinfectant Level (MinRDL) Treatment goal resulting in violations under the Groundwater Rule (GWR).

<b>Lead and Copper</b>							
Contaminant	Action Level (AL)	MCLG	90 <sup>th</sup> Percentile Value	Units	# of Sites Above AL of Total Sites	Violation Y/N	Sources of Contamination
Lead (2019)	15	0	0.00	ppb	0 out of 5	N	Corrosion of household plumbing systems; Erosion of natural deposits
Copper (2019)	1.3	1.3	0.058	ppm	0 out of 5	N	Corrosion of household plumbing systems; Erosion of natural deposits; Leaching from wood preservatives

**Information about Lead**

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Hazel Hurst Water Company is responsible for providing high quality drinking water but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the *Safe Drinking Water Hotline* or at [www.epa.gov/safewater/lead](http://www.epa.gov/safewater/lead).

**OTHER VIOLATIONS:** During 2021 we failed to monitor for Distribution Chlorine the week of 5/23/21 to 5/29/21, sampled late for the 2 Synthetic Organic Chemicals (SOCS) 1,2-Dibromo,3-Chloroprop and Ethylene Dibromide (EDB), and sampled late for Haloacetic Acids (Five), and Trihalomethanes. Public Notification regarding these late samples is enclosed at the end of this report.

**EDUCATIONAL INFORMATION:**

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or human activity. Contaminants that may be present in source water include:

- Microbial contaminants, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations and wildlife.
- Inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban stormwater run-off, industrial or domestic wastewater discharges, oil and gas production, mining or farming.
- Pesticides and herbicides, which may come from a variety of sources such as agriculture, urban stormwater run-off and residential uses.
- Organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations, urban stormwater run-off and septic systems.
- Radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities.

In order to assure that tap water is safe to drink, EPA and DEP prescribes regulations which limit the amount of certain contaminants in water provided by public water systems. FDA and DEP regulations establish limits for contaminants in bottled water which must provide the same protection for public health.

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's *Safe Drinking Water Hotline* (800-426-4791)

## IMPORTANT INFORMATION ABOUT YOUR DRINKING WATER FAILURE TO MONITOR

ESTE INFORME CONTIENE INFORMACIÓN IMPORTANTE ACERCA DE SU AGUA POTABLE. HAGA QUE ALGUIEN LO TRADUZCA PARA USTED, O HABLE CON ALGUIEN QUE LO ENTIENDA.

### Monitoring Requirements Not Met for Hazel Hurst Water Company

Our water system violated several drinking water standards over the past year. Even though these were not emergencies, as our customers, you have a right to know what happened and what we did to correct these situations.

*We are required to monitor your drinking water for specific contaminants on a regular basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards. During 2021 we failed to monitor for Distribution Chlorine the week of 5/23/21 to 5/29/21, sampled late for the 2 Synthetic Organic Chemicals (SOCS) 1,2-Dibromo,3-Chloroprop and Ethylene Dibromide (EDB), and sampled late for Haloacetic Acids (Five) and Trihalomethanes and therefore cannot be sure of the quality of our drinking water during that time.*

#### What should I do?

There is nothing you need to do at this time.

The table below lists the contaminants we did not properly test for during the last year, how often we are supposed to sample for Distribution Chlorine 1,2-Dibromo,3-Chloroprop, Ethylene Dibromide (EDB), Haloacetic Acids (Five), and Trihalomethanes and how many samples we are supposed to take, how many samples we took, when samples should have been taken, and the date on which follow-up samples were taken.

Contaminant	Required sampling frequency	Number of samples taken	When all samples should have been taken	When samples were taken
<i>Distribution Chlorine</i>	Weekly	0-Week of 5/23/21 to 5/29/21	Week of 5/23/21 to 5/29/21	6/1/21
<i>1,2-Dibromo,3-Chloroprop</i>	Every 3 Years 2nd Quarter	0	2nd Quarter of 2021	8/12/21
<i>Ethylene Dibromide (EDB)</i>	Every 3 Years 2nd Quarter	0	2nd Quarter of 2021	8/12/21
<i>Haloacetic Acids (Five)</i>	Every 3 Years	0	+3 days of 9/24/21	9/30/21
<i>Trihalomethanes</i>	Every 3 Years	0	+3 days of 9/24/21	9/30/21

#### What happened? What was done?

During 2021 we failed to monitor for Distribution Chlorine the week of 5/23/21 to 5/29/21, sampled late for the 2 Synthetic Organic Chemicals (SOCS) 1,2-Dibromo,3-Chloroprop and Ethylene Dibromide (EDB), and sampled late for Haloacetic Acids (Five), and Trihalomethanes. All the missed samples were taken when the mistakes were realized.

For more information, please contact Bradley Himes at \_\_ 814-598-3721 \_\_.

*Please share this information with all the other people who drink this water, especially those who may not have received this notice directly (for example, people in apartments, nursing homes, schools, and businesses). You can do this by posting this notice in a public place or distributing copies by hand or mail.*

This notice is being sent to you by the Hazel Hurst Water Company.
